Effective Date: 8-15-2018

Description/Title:

NEW Hakko 999-705 Rework Flux Shield for FR-870B and C5016
NEW Hakko 999-706 Rework Flux Shield for FR-872

Part No:

999-705
999-706

Specification:

| | | |
|---------------|--------------------------------------|---------------------------------------|
| Part Number | 999-705 | 999-706 |
| Compatibility | FR-870B and C5016 | FR-872 |
| Material | Ceramic Glass | |
| Color | Black | |
| Size | 184.15 x 241.3 mm (7.25 x 9.5 in) | 185.75 x 127 mm (11.25 x 15.25 in) |

FR-870B shown with 999-705 installed

Comments:

The NEW Hakko 999-705 and 999-706 rework flux shields are accessories to the FR-870B and FR-872 IR preheaters. These new accessories are made of ceramic glass that can withstand extremely high temperatures without cracking or shattering. The glass sits over the heating area of the preheater and has rubber feet to prevent it from sliding around during use. The glass can be used in conjunction with the existing board holders and act as a shield for any solder or flux that could potentially drop onto the heater lamps. Operators can also mount the rework piece directly on top of the glass for applications that are difficult to mount with the existing board holder.

Users may experience a slight decrease in heating efficiency when using the glass in conjunction with the existing board holder. However, even higher heating temperatures can be achieved when mounting the rework piece directly on top of the glass.
